**Sinopsis**

**ISBN:** 0520236157

In this absorbing collection of 128 duotones, primatologist Waal shares evidence he has collected over the past 30 years on primate sociability and emotional intelligence. Rather than harp on the tired theme, "they're more like us than you think," Waal instead offers warmly personal explanations of the impressive diversity of behavior among primate species, including chimpanzees, baboons, macaques, capuchin monkeys and bonobos.
