Edición: 1^a

Sinopsis

ISBN: 9781560320968

This book simplifies and organizes the solution of heat conduction and diffusion problems to make them more accessible using Green's functions. It covers the topics of heat conduction, transport processes, boundary value problems and mathematical methods. The appendices describe Green's functions as obtained for each of the three coordinate systems: Cartesian, cylindrical, and spherical. Many examples and problems are provided for better understanding.
