Título: Forest Ecosystems. Analysis At Multiple Scales

Autor: Waring / Running

Precio: \$770.00

Editorial:

Año: 2007

Tema:

Edición: 3ª

Sinopsis

ISBN: 9780123706058

"Represents a tour de force of modeling, synthesis and integration. I doubt there is anyone else who would be able to pull all this together in a credible way. The authors have succeeded admirably in capturing the essence of landscape processes, their description and simulation."

--Ron Neilson, USDA Forest Service and Oregon State University, Corvallis

"A nice synthesis and textbook for forest ecosystems. The depth and breadth of their synthesis is admirable, and the work is well-balanced. The book will be a major contribution."

--Michael G. Ryan, USDA Forest Service, Fort Collins

"There is a huge wealth of exciting information in this book. I loved the focus on models. This will be a great book and it will be widely used."

--Kate Lajtha, Oregon State University, Corvallis

"The idea of putting this ecosystem textbook into a modeling framework is a very significant improvement over the 1985 book. Putting scaling as the over-arching theme makes this book most timely."
