Sinopsis

ISBN: 9780415399739

This book will assemble the leaders in this field to discuss their visions of dealing with the topic in the light of the limitations involving the fragility of the early human embryo. The purpose of this book is to shed light on the ever-expanding techniques that are being employed and evaluated with regard to embryo selection. A comprehensive overview may guide the ART practitioner in choice of techniques and evaluation of benefits and drawbacks. In summary, application of increasingly advanced new technology has allowed the field of embryo evaluation to evolve rapidly and dramatically over the past five years, and this book will provide an up-to-date overview and reference source.
