Sinopsis

ISBN: 9780966435436

The book covers 36 years of research in the field of Biocommunication with plants, bacteria, eggs, various living foods, animal cells, and finally human cells. The use of Galvanic Skin Response, EKG and EEG instrumentation is described. His amazing achievement demonstrates the existence of nonlocal instantaneous communication capability. Many of Cleve Backster's experiments have been replicated by others, though there has always been controversy surrounding the implications.
