Título: Recent Advances In Nonlinear Partial Differential Equations And Applications.

Autor: Bonilla/ Carpio/ Vega/ Venakides/ (Ed)

Precio: \$686.00

Editorial:

Año: 2007

Tema:

Edición: 1^a

Sinopsis

ISBN: 9780821842119

The articles of this book are written by leading experts in partial differential equations and their applications, who present overviews here of recent advances in this broad area of mathematics. The formation of shocks in fluids, modern numerical computation of turbulence, the breaking of the Einstein equations in a vacuum, the dynamics of defects in crystals, effects due to entropy in hyperbolic conservation laws, the Navier-Stokes and other limits of the Boltzmann equation, occupancy times for Brownian motion in a two dimensional wedge, and new methods of analyzing and solving integrable systems are some of this volume's subjects. The reader will find an exposition of important advances without a lot of technicalities and with an emphasis on the basic ideas of this field.
