Sinopsis

ISBN: 9781599045887

Agent technologies are believed to be one of the most promising tools to conduct business via networks and the Web in an autonomous, intelligent, and efficient way. The ever-expanding application of business automation necessitates clarification of the methods and techniques of agent-based electronic business systems.

Agent Systems in Electronic Business delivers definitive research to academics and practitioners in the field of business automation on the use of agent technologies to advance the practice of electronic business in today's organizations, targeting the needs of enterprises in open and dynamic business opportunities to incorporate skilled use of multiple independent information systems. This comprehensive resource clearly articulates the stages (electronic commerce transactions, business processes and e-business infrastructure) involved in developing agent-based e-business systems.
