Sinopsis

ISBN: 9783540737919

The intent of this book is to set the modern foundations of the theory of generalized curvature measures. Following a historical and didactic approach, the book introduces the mathematical background of the subject, beginning with curves and surfaces, going on with convex subset's, smooth submanifolds, subsets of positive reach, polyhedra and triangulations, and ending with surface reconstruction." This book can serve as a textbook to any mathematician or computer scientist, engineer or researcher who is interested, in the theory of curvature measures.
