**Sinopsis**

**ISBN:** 9780136006633

Discusses the key principles of both kinds of systems \_ including MS-DOS, UNIX, Amoeba, and Mach.

Covers all the traditional topics, including interprocess, communication, semaphores, monitors, scheduling algorithms, deadlocks, virtual memory, and file system design.

Explores all key issues in distributed systems \_ including the client-server model, remote procedure call, distributed synchronization, transactions, threads, distributed shared memory, and file servers.

Reflects real-world experience that provides practical, hands-on information in constructing and understanding modern operating systems.
