

Librería
Bonilla y Asociados
desde 1950

Título: Encyclopedia Of Agricultural, Food, And Biological Engineering

Autor: Heldman, Dennis R

Precio: \$7938.00

Editorial:

Año: 2003

Tema:

Edición: 1ª

Sinopsis

ISBN: 9780824709389

Content:

Activation Energy in Thermal Process Calculations | Aquacultural Product Storage Systems | Convective Heat Transfer Coefficients | Dehydration Process Energy Balances | Extrusion System Components | Fermentation Process Material and Energy Balances | Forage Production Systems-Machine Design | Glass Transition Temperatures | Heating and Cooling in Agitated Vessels | Homeostasis in Animal Environment | Indirect Contact Freezing Systems | Kinetics of Soil Removal During Cleaning | Machine Vision in Precision Agriculture | Mass Transfer in Biological Membranes | Membrane Separation System Design | Microwave Modification of Wood Properties | Physical Properties of Agricultural Products | Processing Waste Land Application | Processing Wastewater Recovery | Properties of Concentrated Foods | Properties of Food Powders | Radio Frequency Heating and Other RF Applications Relevant to the Food Industry | Residence Time Distribution-Biomedical, Food, and Environmental Applications
