Título: Novel Enzyme Technology For Food Applications

Autor: Rastall, Robert

Precio: \$3645.00

Editorial:

Año: 2007

Tema:

Edición: 1ª

Sinopsis

ISBN: 9781420043969

Written by an international team of contributors, *Novel Enzyme Technology for Food Applications* reviews the latest advanced methods to develop specific enzymes and their applications. Part 1 discusses fundamental aspects of industrial enzyme technology. Chapters cover the discovery, improvement and production of enzymes as well as consumer attitudes towards the technology. Part 2 explores enzyme technology for specific food applications such as textural improvement, protein-based fat replacers, flavor enhancers, and health-functional carbohydrates. It is a standard reference for all those in industry and academia concerned with improving food products with this advanced technology.

Contents.

PRINCIPLES OF INDUSTRIAL ENZYME TECHNOLOGY

Discovering New Industrial Enzymes for Food Applications, T. Schäfer

Introduction

Where to Screen for New Enzymes

How to Screen for New Enzymes

Summary: Which Option to Choose?

References

Improving Enzyme Performance in Food Applications, R. Machielsen and S. Dijkhuizen, T. Kaper and L. Looger, and J. van der Oost

Introduction

Evolution in the Laboratory

Examples of Improving Enzyme Stability and Functionality by Laboratory Evolution

Rational and Computational Protein Engineering

Examples of Improving Enzyme stability and Functionality by Rational Protein Engineering

Examples of Combined Laboratory Evolution and Computational Design

Summary and Future Trends

Sources of Further Information and Advice
References

Industrial Enzyme Production for Food Applications, C. Hjort
Introduction
Traditional Sources and Processes for Industrial Enzyme Production
Design of Expression Systems for Industrial Enzyme Production
Development of an Enzyme Production Process
Future Trends
Sources of Further Information and Advice
References

Immobilized Enzyme Technology for Food Applications, M.K. Walsh
Introduction
Immobilised Enzyme Technology for Modification of Acylglycerols
Immobilised Enzyme Technology for Modification of Carbohydrates
Immobilised Enzyme Technology for Protein Modification
Immobilised Enzyme Technology for Production of Flavor Compounds
Future Trends
References

Consumer Attitudes Towards Novel Enzyme Technologies in Food Processing, H. Søndergaard, K. Grunert, and J. Scholderer
Introduction
How Consumers Form Attitudes to New Food Production Technologies
Studies of Consumer Attitudes to Enzyme Technologies
Implications of Consumer Attitudes to Enzyme Technologies
Future Trends
Sources of Further Information and Advice
Acknowledgements

Using Cross-Linking Enzymes in Baking and Pasta Manufacture
Using Cross-Linking Enzymes in Meat and Fish Processing
Using Cross-Linking Enzymes in Dairy Applications
Other Applications of Cross-Linking Enzymes in Food Manufacture
Analysing the Chemistry of Cross-Links Formed by Enzymes
Effect of Biopolymer Cross-Linking on Nutritional Properties of Food
Summary and Future Trends
References

Enzymatically-Modified Whey Protein and Other Protein-Based Fat Replacers, J. Leman
Introduction
Enhancing the Fat Mimicking Properties of Proteins
Applications in Low-Fat Foods
Future Trends
References

Enzymatic Production of Bioactive Peptides from Milk and Whey Proteins, P. Ortiz-Chao and P. Jauregi
Introduction
Milk Protein-Derived Bioactive Peptides
Enzymatic Production of Bioactive Peptides from Milk and Whey Proteins
Future Trends
Sources of Further Information and Advice
References

Production of Flavours, Flavour Enhancers and Other Protein-Based Speciality Products, B. West
Introduction
Production of Mono-Sodium Glutamate (MSG)
Production of Chondroitin Sulphate
Production of Aspartame
Enzymes for Vanilla Extraction
Enzyme Modified Cheese (EMC) as a Flavour Ingredient
Enzymes Used in Savoury Flavourings
Enzymes Used in Yeast Extract Manufacture
Future Trends
Sources of Further Information and Advice
