Edición: 1ª

Sinopsis

ISBN: 9781405115162

This book outlines a generic set of procedures, termed the River Styles Framework, which provides a set of tools for interpreting river character, behavior, condition, and recovery potential. Applications of the framework generate a coherent package of geomorphic information, providing a physical template for river rehabilitation activities.

management and restoration of rivers is a rapidly growing topic for environmental scientists, geologists and ecologists - this book provides a learning tool with which to approach geomorphic applications to river management

describes the essential geomorphological principles underlying river behaviour and evolution

demonstrates how the River Styles Framework can turn geomorphic theory into practice, to develop workable strategies for restoration and management

based on real case studies and authors extensive experience

applicable to river systems worldwide

synthesises fluvial geomorphology, ecology and management
