Título: Mathematical Aspects Of Fluid Mechanics

Autor: Robinson, James C. ; Jose L. Rodrigo And Witold Sadowski

Precio: \$1144.00

Editorial:

Año: 2012

Tema:

Edición: 1ª

Sinopsis

ISBN: 9781107609259

The rigorous mathematical theory of the equations of fluid dynamics has been a focus of intense activity in recent years. This volume is the product of a workshop held at the University of Warwick to consolidate, survey and further advance the subject. The Navier-Stokes equations feature prominently: the reader will find new results concerning feedback stabilisation, stretching and folding, and decay in norm of solutions to these fundamental equations of fluid motion. Other topics covered include new models for turbulent energy cascade, existence and uniqueness results for complex fluids and certain interesting solutions of the SQG equation. The result is an accessible collection of survey articles and more traditional research papers that will serve both as a helpful overview for graduate students new to the area and as a useful resource for more established researchers.
