The authors discuss two case studies in their investigation of the complex interactions between environmental justice and government. These analyses offer a comprehensive view of both the siting and regulation of polluting activities, as well as a discussion of the effects on major natural resources such as clean air and drinking water. In each case, the authors both describe current government responses to the problem and offer specific recommendations regarding what actions should be taken in the future.

This authoritative book will make an invaluable addition to courses in environmental law and policy. Professionals and policymakers working in disciplines such as law, economics, environmental science, philosophy and political science will also find this a comprehensive and critical reference.
