Título: Proteomics Of Biological Systems: Protein Phosphorylation Using Mass Spectrometr

Autor: Bryan M. Ham

Precio: \$1042.20

Editorial:

Año: 2011

Tema:

Edición: 1^a

Sinopsis

ISBN: 9781118028964

Phosphorylation is the addition of a phosphate (PO₄) group to a protein or other organic molecule. Phosphorylation activates or deactivates many protein enzymes, causing or preventing the mechanisms of diseases such as cancer and diabetes. This book shows how to use mass spectrometry to determine whether or not a protein has been correctly modified by the addition of a phosphate group. It also provides a combination of detailed, step-by-step methodology for phosphoproteomic sample preparation, mass spectral instrumental analysis, and data interpretation approaches. Furthermore, it includes the use of bioinformatic Internet tools such as the Blast2GO gene ontology (GO) tool, used to help understand and interpret complex data collected in these studies.
