Sinopsis	ISBN: 9781472521903

Stop-motion Animation teaches the skills required to develop as a creative stop-motion animator. It explores how all the elements of film-making - camera work, design, colour, lighting, editing, music and storytelling - come together in this unique art form.

With advice on how to use the particular types of movement, characters and stories that typify stop-motion, this book is packed with tips and suggestions to help you get the most out of your stop-motion films, accompanied by illustrations and case studies demonstrating how film-making masters through the years have used it in feature films, short films and television.

This second edition also introduces and explores two of the biggest innovations of recent years at opposite ends of the industry. At the top-end, for film-makers with serious budgets, there is 3D printing in the creation of replacement parts for stop-motion characters while at the amateur/student end of the industry there are a variety of cheap, but effective, apps that can turn turn a smartphone into a mini stop-motion studio.

The new edition also includes an extended project in each chapter, covering storytelling techniques, selecting an appropriate style, developing a character, set building and lighting, creating a performance and adding music. These projects combine to lead you through the creation of your first one-minute stop-motion animation.
