Título: Electrochemistry For The Environment

Autor: Christos Comninellis And Guohua Chen Precio: \$1450.00

Editorial: Año: 2010

Tema: Edición: 1ª

Sinopsis ISBN: 9780387369228

The book starts with the fundamentals of environmental electrochemistry, introducing the basic techniques in selecting and fabricating electrode materials, followed by a theoretical analysis of the electrochemical processes, green electrochemical operation, discussion of electrochemical technologies in water treatment, and then examination of the established wastewater treatment technologies such as electrochemical reactors for metal recovery, electrocoagulation, electroflotation and electrochemical technologies such as electrophotooxidation, electro disinfection, and electrochemical technologies in sludge and soil treatment will also be analyzed. This book will be an excellent reference for young researchers starting new research programs and also for industrialists who wish to appreciate the technologies.
