Biochemistry Molecular Biology of Plants is a major contribution to the plant sciences literature, superbly edited by three distinguished scientists, Bob B. Buchanan, Wilhelm Gruissem, and Russell L. Jones, with contributions from more than 50 world-renowned scientists. With over 1,400 pages, 1,100 full-colour original drawings and 500 photographs this work qualifies, in the words of the Science reviewer, as:

"an essential reference for practicing plant biologists and for the increasing number of scientists from other disciplines who are entering the field of plant biology. To exploit fully the wealth of new information provided by the genome projects and to integrate the metabolic, regulatory, and signal transduction pathways of complex organisms, biologists will require a solid command of biochemistry and physiology. For this reason, the publication of Biochemistry Molecular Biology of Plants could not have come at a more opportune and auspicious time."
