**Título:** Lectures In Logic And Set Theory. Volume 1, Mathematical Logic

**Autor:** Turlakis, George

**Precio:** \$910.00

**Editorial:**

**Año:** 2003

**Tema:**

**Edición:** 1<sup>a</sup>

**Sinopsis**

**ISBN:** 9780521753739

This two-volume work bridges the gap between introductory expositions of logic or set theory on one hand, and the research literature on the other. It can be used as a text in an advanced undergraduate or beginning graduate course in mathematics, computer science, or philosophy. The volumes are written in a user-friendly conversational lecture style that makes them equally effective for self-study or class use. Volume I includes formal proof techniques, a section on applications of compactness (including nonstandard analysis), a generous dose of computability and its relation to the incompleteness phenomenon, and the first presentation of a complete proof of Godel's 2nd incompleteness since Hilbert and Bernay's Grundlagen theorem.

! User-friendly extensive discussion of issues that arise at the interface of axiomatics and mathematical `reality' ! A complete proof of Godel's 2nd incompleteness theorem ! A thorough foundation of Nonstandard Analysis
