Título: Photonics. Linear And Nonlinear Interactions Of Laser Light And Matter

Autor: Menzel, Ralf

Precio: \$1309.00

Editorial:

Año: 2007

Tema:

Edición: 2ª

Sinopsis

ISBN: 9783540231608

This book covers the fundamental properties and the description of single photons and light beams, experimentally and theoretically. It explains the essentials of linear interactions and most nonlinear interactions between light and matter in both the transparent and absorbing cases. It also provides a basic understanding of modern quantum optics and lasers, as well as the principles of nonlinear optical spectroscopy. It is self-consistent and enriched by a large number of calculated illustrations, examples, and descriptive tables. Graduate students in physics and electrical engineering, as well as other sciences, will find this book a thorough introduction to the field, while for lecturers and scientists it is a rich source of useful information and a ready-to-hand reference. The new edition has been thoroughly expanded and revised in all sections.
