Sinopsis

ISBN:

A reference work covering commercial coating processes. Coating types covered include organic coatings (paints) and their process cycles, electroplating, "vacuum deposition" coatings, electroless plating, and conversion coatings. The bulk of the book is taken up with an alphabetical listing of 2,000-plus processes, products, and equipment. Each entry includes the name of the manufacturer, a description of the product, uses, properties, and substrate (when appropriate). Also included are an index by process type and tables of ASTM standards, SAE standards, US military and federal standards, electrochemical data for commonly plated metals, and chemical elements.
