Sinopsis

ISBN: 9780871703781

The second of two volumes in the 10th edition of Metals handbook that present information on compositions, properties, selection, and applications of metals and alloys. In the first volume (see SciTech Book News, October 1990), irons, steels, and superalloys were described. In the present volume, nonferrous alloys, superconducting materials, pure metals, and materials developed for use in special applications are reviewed in 62 articles, of which 31 are completely new to the Metals handbook series, eight are completely rewritten, with the remainder revised and/or expanded.
