Sinopsis

ISBN: 9780805395921

Concentrating on aspects of genetics such as the role of chemistry, genome maintenance and expression, regulation, and methods, this textbook contains chapters on nucleic acids, high-energy bonds, the structures of DNA and RNA, chromosomes and chromatin, mutability, transcription, RNA splicing, comparative genomics and evolution, model organisms, and related topics. The authors are scientists and scholars from around the United States.
