Edición: 1^a

Sinopsis

ISBN: 9780849319112

One of the most often-used words in studies of the environment, development and globalization is "sustainability." In this collection of 15 article/chapters, contributors describe their research in post- harvest processes including physical and non-physical procedures, with topics such as heat treatment, modified atmospheric packaging and storage, quarantine, handling of fresh-cut produce, innovative environmentally friendly technologies, UV radiation, biological agents, natural compounds, edible coatings, hormonal regulation, genetic engineering, and transportation.
