Sinopsis

ISBN: 9780851993904

Twenty chapters summarize current information for the diagnosis and treatment of the diseases that impact the health of tropical fruit plants used for crop production. Arranged alphabetically by fruit, each chapter lists the symptoms, causal agent, epidemiology, and management measures for 10- 25 foliar, fruit, soilborne, and viral diseases. The largest chapters address diseases of the avocado, banana and plantain, mango, and papaya while smaller chapters cover diseases of the breadfruit, durian, fig, and guava. Black-and-white photographs and color plates are provided for illustration. Distributed by Oxford University Press.
