Sinopsis

ISBN: 9781599049663

The most thrilling and challenging intellectual issues of humanity: whether and how a consistent account of reality can be obtained; which field of knowledge is capable to deal with the whole reality and its formal representation; and how powerful intelligent machines can be brought into existence; are research areas demanding innovative and comprehensive study.

Reality, Universal Ontology, and Knowledge Systems: Toward the Intelligent World provides cutting-edge research on reality, its nature and fundamental structure, and how it may be effectively represented both by human minds and intelligent machines-striving to describe a standard world model and universal formal ontology; uniformly organized human knowledge; powerful reasoning systems; and secure communication interoperability between two species of intelligences: existing human beings and nascent computing reasoning systems; promising the profound revolution in human values and ways of life.
