Título: Environmental Modeling. Fate And Transport Of Pollutants In Water, Air, And Soil

Autor: Schnoor Jerald L

Precio: \$2103.00

Editorial:

Año: 1996

Tema:

Edición: 1ª

Sinopsis

ISBN: 9780471124368

The only textbook to combine engineering transport fundamentals and equilibrium aquatic chemistry, Environmental Modeling brings a uniquely contemporary perspective to the assessment of environmental quality. Addressing key questions about fate, transport, and long-term effects of chemical pollutants in the environment, this inherently practical text gives readers the important tools they need to develop and solve their own mathematical models.

Contains detailed examples from a wide range of crucial water quality areas-conventional pollutants in rivers, eutrophication of lakes, and toxic organic chemicals and heavy metals in both surface and groundwaters
