Sinopsis

ISBN: 0486450406

Geared toward advanced undergraduates and graduate students, this text systematically develops the concepts of electrical acceleration of gases for propulsion. Starting with primary physical principles and concluding with realistic space thruster designs, it surveys aspects of electricity, magnetism, and ionized gas mechanics underlying physical mechanisms of gas acceleration. 1968 edition.

Unabridged republication of the edition published by McGraw-Hill Book Company, New York, 1968.
