Edición: 5ª

Sinopsis

ISBN: 9780136076636

A comprehensive introduction to the tools and skills required for both client- and server-side programming, that teaches how to develop platform-independent sites using the most current Web development technology. KEY TOPICS: Internet introduction; Web Browsers and Servers; URL; MIME; HTTP; Web Programmer's Toolbox; HTML and XHTML; CSS; JavaScriptÖ; XML and XLST; Applets; Flash; PerlÖ/CGI; Java Web Programming; PHP; ASP.NET Using C# and Ajax; Visual Studio; Database Access through the Web; Ruby; Rails 2.0; Ajax. MARKET: An ideal reference for Web programming professionals.

Robert Sebesta is the author of the worldUs leading book on comparative programming languages, Concepts of Programming Languages. Hundreds of thousands of people have learned how to program from his books. He has written Programming the World Wide Web not just as a reference of various methods for programming the WWW, but rather to focus in on the core concepts that web programmers must understand. This book provides readers with a comprehensive introduction to the programming and scripting languages currently used to create web sites and applications. In this holistic approach, readers are guided through concepts relating to client-side and server-side programming, including JavaScript, Perl, Java Servlets, Java Applets, Web Databases, and the Apache Web Server. This book is ideal for readers with knowledge of Java or C programming, as well as programmers looking to expand their skills onto the World Wide Web.

Robert Sebesta is an Associate Professor in the Computer Science Department at the University of Colorado, Colorado Springs. Professor Sebesta received a BS in applied mathematics from the University of Colorado, Boulder, and MS and PhD degrees in computer science from the Pennsylvania State University. His professional interests are the design and evaluation of programming languages, compiler design, and software testing methods and tools. He is the author of Addison-Wesley's Concepts of Programming Languages and Programming the World Wide Web.
