Título: Tensor Spaces And Exterior Algebra

Autor: Yokonuma Takeo

Precio: \$699.07

Editorial:

Año: 1992

Tema:

Edición: 1^a

Sinopsis

ISBN: 9780821827963

This book explains, as clearly as possible, tensors and such related topics as tensor products of vector spaces, tensor algebras, and exterior algebras. You will appreciate Yokonuma's lucid and methodical treatment of the subject. This book is useful in undergraduate and graduate courses in multilinear algebra.

Tensor Spaces and Exterior Algebra begins with basic notions associated with tensors. To facilitate understanding of the definitions, Yokonuma often presents two or more different ways of describing one object. Next, the properties and applications of tensors are developed, including the classical definition of tensors and the description of relative tensors. Also discussed are the algebraic foundations of tensor calculus and applications of exterior algebra to determinants and to geometry. This book closes with an examination of algebraic systems with bilinear multiplication. In particular, Yokonuma discusses the theory of replicas of Chevalley and several properties of Lie algebras deduced from them.

Table of Contents

Definition of tensor products

Tensors and tensor algebras

Exterior algebra and its applications

Algebraic systems with bilinear multiplication. Lie algebras

Exercises
