**Título:** Energy For Sustainability. Technology, Planning, Policy

**Autor:** John Randolph, Gilbert Masters

**Precio:** \$1260.00

**Editorial:**

**Año:** 2008

**Tema:**

**Edición:** 1ª

**Sinopsis**

**ISBN:** 9781597261036

Energy for Sustainability is the first undergraduate textbook on renewable energy and energy efficiency with a unique focus on the community scale. Written by two of the foremost experts in the field, it is a pedagogically complete treatment of energy sources and uses. It examines the full range of issues\_from generating technologies to land use planning\_in making the transition to sustainable energy.

The book begins by providing a historical perspective on energy use by human civilizations and then covers energy fundamentals and trends; buildings and energy; sustainable electricity; sustainable transportation and land use; and energy policy and planning. Included in these topical areas are in-depth discussions of all of the most promising sources of renewable energy, including solar photovoltaic systems, wind turbines, and biofuels. In addition, the authors offer a thorough presentation of "green" building design, the impact of land use and transportation patterns on energy use, and the policies needed to transform energy markets at the local, state, and national levels. Throughout, the authors first provide the necessary theory and then demonstrate how it can be applied, utilizing cutting-edge practices and technologies, and the most current available data.

Since the dawn of the industrial age, the explosive growth in economic productivity has been fueled by oil, coal, and natural gas. World energy use nearly doubled between 1975 and 2005. China's energy use has been doubling every decade. The implications for the environment are staggering. One way or another, our reliance on fossil fuels will have to end. Energy for Sustainability evaluates the alternatives and helps students understand how, with good planning and policy decisions, renewable energy and efficiency can support world demands at costs we can afford\_economically, environmentally, and socially.

**Biographies**

John Randolph is director of the School of Public & International Affairs and professor of environmental planning at Virginia Polytechnic Institute and State University. He is the author of

Environmental Land Use Planning and Management (Island Press, 2003). In 2006, he was awarded the William R. and June Dale Prize for Excellence in Urban and Regional Planning.

Gilbert M. Masters is professor of civil and environmental engineering (emeritus) at Stanford University. He is the author of six books, including the widely used textbook Introduction to Environmental Engineering and Science.

Table Of Contents

Preface

Acknowledgments

Section I: Energy Patterns and Trends

Chapter 1: The Energy Imperative and Patterns of Use

Chapter 2: Energy Sources and Sustainability

Chapter 3: Energy Futures

Section II: Energy Fundamentals

Chapter 4: Fundamentals of Energy Science

Chapter 5: Energy Analysis and Life-Cycle Assessment

Section III: Buildings and Energy

Chapter 6: Energy Efficiency for Buildings

Chapter 7: Solar Energy for Buildings

Chapter 8: From Whole Building to Whole Community Energy

Section IV: Sustainable Electricity

Chapter 9: Centralized Electric Power Systems

Chapter 10: Distributed Energy Resources

Chapter 11: Photovoltaic Systems

Chapter 12: Large-Scale Renewables: Wind and Solar

Section V: Sustainable Transportation and Land Use

Chapter 13: Transportation Energy and Efficient Vehicles

Chapter 14: Biofuels, Biomass, and Other Alternative Fuels

Chapter 15: Whole Community Energy and Land Use

Section VI: Energy Policy and Planning

Chapter 16: Market Transformation to Sustainable Energy

Teléfonos: 55 44 73 40 y 55 44 72 91
