**Título:** Quantum Theory Of The Optical And Electronic Properties Of Semiconductors

**Autor:** Haug, Hartmut/ Koch, Stephan W

**Precio:** \$756.00

**Editorial:**

**Año:** 2009

**Tema:**

**Edición:** 5ª

**Sinopsis**

**ISBN:** 9789812838841

This invaluable textbook presents the basic elements needed to understand and research into semiconductor physics. It deals with elementary excitations in bulk and low-dimensional semiconductors, including quantum wells, quantum wires and quantum dots. The basic principles underlying optical nonlinearities are developed, including excitonic and many-body plasma effects. Fundamentals of optical bistability, semiconductor lasers, femtosecond excitation, the optical Stark effect, the semiconductor photon echo, magneto-optic effects, as well as bulk and quantum-confined Franz-Keldysh effects, are covered. The material is presented in sufficient detail for graduate students and researchers with a general background in quantum mechanics.

This fifth edition includes an additional chapter on 'Quantum Optical Effects' where the theory of quantum optical effects in semiconductors is detailed. Besides deriving the 'semiconductor luminescence equations' and the expression for the stationary luminescence spectrum, results are presented to show the importance of Coulombic effects on the semiconductor luminescence and to elucidate the role of excitonic populations.

Contents:

Oscillator Model  
Atoms in a Classical Light Field  
Periodic Lattice of Atoms  
Mesoscopic Semiconductor Structures  
Free Carrier Transitions  
Ideal Quantum Gases  
Interacting Electron Gas  
Plasmons and Plasma Screening  
Retarded Green's Function for Electrons  
Excitons  
Polaritons

Teléfonos: 55 44 73 40 y 55 44 72 91

*Librería*  
***Bonilla y Asociados***  
*desde 1950*

Semiconductor Bloch Equations  
Excitonic Optical Stark Effect  
Wave-Mixing Spectroscopy  
Optical Properties of a Quasi-Equilibrium Electron-Hole Plasma  
Optical Bistability  
Semiconductor Laser  
Electroabsorption  
Magneto-Optics  
Quantum Dots  
Coulomb Quantum Kinetics  
Quantum Optical Effects
