Título: Chasing Molecules. Poisonous Products, Human Health, And The Promise Of Green Che

Autor: Grooman, Elizabeth

Precio: \$378.00

Editorial:

Año: 2009

Tema:

Edición: 1ª

Sinopsis

ISBN: 9781597263702

Elizabeth Grossman, an acclaimed journalist who brought national attention to the contaminants hidden in computers and other high tech electronics, now tackles the hazards of ordinary consumer products. She shows that for the sake of convenience, efficiency, and short-term safety, we have created synthetic chemicals that fundamentally change, at a molecular level, the way our bodies work. The consequences range from diabetes to cancer, reproductive and neurological disorders.

Yet it's hard to imagine life without the creature comforts current materials provide_and Grossman argues we do not have to. A scientific revolution is introducing products that are "benign by design," developing manufacturing processes that consider health impacts at every stage, and is creating new compounds that mimic rather than disrupt natural systems. Through interviews with leading researchers, Grossman gives us a first look at this radical transformation.
