Edición: 4ª

Sinopsis

ISBN: 9780195305753

Biochemistry: The Molecular Basis of Life, Fourth Edition, is the ideal text for students who do not specialize in biochemistry but require a strong grasp of essential biochemical principles for their future careers.

NEW TO THE FOURTH EDITION:

- * Increased relevance: Features brand-new "Biochemistry in Perspective" essays that show students how biochemical principles will be applied in their future scientific careers
- * Enhanced problem-solving: Includes twice as many problems as the previous edition, spanning a wider range of difficulty and equipping students with stronger skills in critical thinking
- * Greater currency: Covers the latest scholarship on such topics as macromolecular crowding, systems biology, and protein-folding diseases, to keep students up to date and poised for further study
- * Improved illustrations: Includes more than sixty new figures to better help students visualize complex biochemical processes and understand the impact of these processes on the living state
