**Título:** Spectral Methods In Surface Superconductivity. (Pnlde Vol. 77)

**Autor:** Fournais, Soren; Helffer, Bernard

**Precio:** \$936.88

**Editorial:**

**Año:** 2010

**Tema:**

**Edición:** 1<sup>a</sup>

**Sinopsis**

**ISBN:** 9780817647964

During the past decade, the mathematics of superconductivity has been the subject of intense activity. This book examines in detail the nonlinear Ginzburg-Landau functional, the model most commonly used in the study of superconductivity. Specifically covered are cases in the presence of a strong magnetic field and with a sufficiently large Ginzburg-Landau parameter  $\kappa$ .

Key topics and features of the work:

- \* Provides a concrete introduction to techniques in spectral theory and partial differential equations
- \* Offers a complete analysis of the two-dimensional Ginzburg-Landau functional with large  $\kappa$  in the presence of a magnetic field
- \* Treats the three-dimensional case thoroughly
- \* Includes open problems

Spectral Methods in Surface Superconductivity is intended for students and researchers with a graduate-level understanding of functional analysis, spectral theory, and the analysis of partial differential equations. The book also includes an overview of all nonstandard material as well as important semi-classical techniques in spectral theory that are involved in the nonlinear study of superconductivity.
