**Título:** Eigenvalues, Embeddings And Generalised Trigonometric Functions (Vol. 2016)

**Autor:** Lang, Jan, Edmunds, David

**Precio:** \$821.30

**Editorial:**

**Año:** 2011

**Tema:**

**Edición:** 1<sup>a</sup>

**Sinopsis**

**ISBN:** 9783642182679

The main theme of the book is the study, from the standpoint of  $s$ -numbers, of integral operators of Hardy type and related Sobolev embeddings. In the theory of  $s$ -numbers the idea is to attach to every bounded linear map between Banach spaces a monotone decreasing sequence of non-negative numbers with a view to the classification of operators according to the way in which these numbers approach a limit: approximation numbers provide an especially important example of such numbers. The asymptotic behavior of the  $s$ -numbers of Hardy operators acting between Lebesgue spaces is determined here in a wide variety of cases. The proof methods involve the geometry of Banach spaces and generalized trigonometric functions; there are connections with the theory of the  $p$ -Laplacian.
