Sinopsis

ISBN: 9780821851968

The papers in this volume cover a wide variety of topics in the geometric theory of functions of one and several complex variables, including univalent functions, conformal and quasiconformal mappings, and dynamics in infinite-dimensional spaces. In addition, there are several articles dealing with various aspects of Lie groups, control theory, and optimization. Taken together, the articles provide the reader with a panorama of activity in complex analysis and quasiconformal mappings, drawn by a number of leading figures in the field.

The companion volume (Contemporary Mathematics, Volume 554) is devoted to general relativity, geometry, and PDE.

This book is co-published with Bar-Ilan University (Ramat-Gan, Israel).
