Título: Wheel Perspective (Green Energy And Technology)

Autor: Reijnders, Lucas

Precio: \$1938.00

Editorial:

Año: 2009

Tema:

Edición: 1ª

Sinopsis

ISBN: 9781848821378

Biofuels for Road Transport: A Seed to Wheel Perspective provides a review of the history, the current status and the impact of biofuels used in road transport, across the full 'seed-to-wheel' life cycle of these fuels. Successive chapters cover many issues relevant to the current debate on biofuels, such as cost, competition with food production, contribution to energy security, use of natural resources, and environmental impact. The final chapter addresses common concerns about biofuels, including questions on sustainability and government policy.

Biofuels for Road Transport: A Seed to Wheel Perspective is a valuable reference for professional engineers, researchers and postgraduate students involved in biofuels, renewable energy (including bioenergy) and the automotive industry.
