Título: Networks And Graphs Techniques And Computational Methods

Autor: Smith, David K.

Precio: \$1398.00

Editorial:

Año: 2003

Tema:

Edición: 1^a

Sinopsis

ISBN: 9781898563914

- presents essential mathematical and computational ideas of network optimisation for senior undergraduate and postgraduate students in mathematics, computer science and operational research
- demonstrates how algorithms can be used for finding optimal paths and flows, identifying trees in networks and optimal matching
- numerous examples and diagrams illustrate the techniques and applications

Dr Smith here presents essential mathematical and computational ideas of network optimisation for senior undergraduate and postgraduate students in mathematics, computer science and operational research. He shows how algorithms can be used for finding optimal paths and flows, identifying trees in networks, and optimal matching. Later chapters discuss postman and salesperson tours, and demonstrate how many network problems are related to the "minimal-cost feasible-flow" problem. Techniques are presented both informally and with mathematical rigour and aspects of computation, especially of complexity, have been included. Numerous examples and diagrams illustrate the techniques and applications. The book also includes problem exercises with tutorial hints.
