**Sinopsis**

**ISBN:** 9788847028524

An unusually wide scope of developments in Harmonic Analysis

Contributions by leading experts in each area

A unique panorama of the development of Italian harmonic Analysis, a plus for the new INdAM-Springer collection

Dedicated to a famous mathematician in the occasion of his retirement

This book illustrates the wide range of research subjects developed by the Italian research group in harmonic analysis, originally started by Alessandro Figà-Talamanca, to whom it is dedicated in the occasion of his retirement. In particular, it outlines some of the impressive ramifications of the mathematical developments that began when Figà-Talamanca brought the study of harmonic analysis to Italy; the research group that he nurtured has now expanded to cover many areas. Therefore the book is addressed not only to experts in harmonic analysis, summability of Fourier series and singular integrals, but also in potential theory, symmetric spaces, analysis and partial differential equations on Riemannian manifolds, analysis on graphs, trees, buildings and discrete groups, Lie groups and Lie algebras, and even in far-reaching applications as for instance cellular automata and signal processing (low-discrepancy sampling, Gaussian noise).

Content Level » Research

Keywords » Analysis on discrete groups and graphs - Harmonic Analysis - Hecke algebras on Bruhat-Tits affine buildings - Lie groups and symmetric spaces - Potential Theory
