Edición: 1ª

Sinopsis

ISBN: 9781888009187

Green Lion Press has prepared a new one-volume edition of T.L. Heath's translation of the thirteen books of Euclid's "Elements" In keeping with Green Lion's design commitment, diagrams have been placed on every spread for convenient reference while working through the proofs; running heads on every page indicate both Euclid's book number and proposition numbers for that page; and adequate space for notes is allowed between propositions and around diagrams. The all-new index has built into it a glossary of Euclid's Green terms.

I had not imagined that there was anything so delicious in the world. -- Bertrand Russell

If you want your students to really grapple with Euclid, this is the edition to choose. -- Fernando Q. Gouvea, MAA Online, August 2002

About the Author

Euclid is the most celebrated mathematician of all time. He lived in the third or fourth century B. C. E., after Plato but before Apollonius of Perga. His fame rests preeminently upon the Elements, which he wrote in thirteen books and which is said to have exercised an influence on the human mind greater than that of any other work except the Bible.
