Edición: 1ª

Sinopsis

ISBN: 9781781006412

'I congratulate the Institute of Water Policy, the two editors and the contributors for a very thoughtful book on urban water governance. Our objective is to deliver sustainable water and sanitation services to our people. This book contains useful lessons on how to achieve that objective.'

- Tommy Koh, Chairman, Governing Council, Asia-Pacific Water Forum

Contents

Contributors: A. Akintoye, L. Bhullar, E. Chong, A.N. Chowdhury, C. Dewan, V. Garcia, B.O. Giuponni, A. Gunawansa, S.F. Hoque, A. Kajenthira, A. Mahalingham, C. Ménard, S. Murthy, M. Paddon, E. Pérard, S. Renukappa, Z. Sha, R.L.K. Tiong, H. Tropp, A. Wong

Further information

'Ensuring that everybody has access to drinking water, sanitation and enough nutritious food, which depends on water to grow it, are prerequisites for a healthy life. Water management is not just about the technical aspects of water supply and sanitation. It is equally about our water governance systems, including policies, regulation and societal perception of water rights. This book presents many helpful examples of how different societies are dealing with these issues and of the performance of public and private sector players in this important arena.'

- Colin Chartres, International Water Management Institute (IWMI), Colombo, Sri Lanka

and highlights the advantages and disadvantages of publicly run, privatized, and public-private partnership managed water facilities.

The contributors expertly discuss various types of public and private water governance architectures as well as identifying the trends, challenges, opportunities and the shifts in perceptions with regard to the provision of water supply services. Many chapters are dedicated to analyzing the urban water supply scenarios in selected countries, with specific focus on legal, policy and institutional frameworks. The study reveals that while private sector participation has been largely promoted by multilateral institutions as part of institutional and financial reforms, ultimately governments bear the major responsibility for provision of water supply services either as 'service provider' or as 'regulator and policy-maker'.

Containing a detailed overview and analysis of the global urban water supply sector, this timely book will strongly appeal to academics, researchers and university students following water-related courses. Water sector professionals, water regulators and public officers as well as managers and researchers employed by private sector water operators will also find plenty of invaluable information in this important resource.
