Edición: 1ª

Sinopsis

ISBN: 9780821888032

This text provides a new proof of Glauberman's Z^* -Theorem under the additional hypothesis that the simple groups involved in the centraliser of an isolated involution are known simple groups.

Table of Contents

Introduction
Preliminaries
Isolated involutions
A minimal counter-example to Glauberman's Z^* -theorem
Balance and signalizer functors
Preparatory results for the local analysis
Maximal subgroups containing C
The 2-rank of $O_2^{\epsilon,2}(C)$
Components of C^{σ} and the Soluble Z^* -theorem
Unbalanced components
The 2-rank of G
The F^* -structure theorem
More involutions
The endgame
The final contradiction and the Z^* -theorem for K_2 -Groups
Bibliography
