Tema: Edición: 1ª

Sinopsis ISBN: 9780072883626

This book covers chemical kinetics from the working chemist's point of view. Competing books present a more theoretical presentation of kinetics. This book is a how to book for designing experiments, analyzing them and critiquing them. This book also prepares chemists to devise experiments to test different hypothesis. A large number of examples from the research literature have been used as the main teaching tool. Each book will come with a diskette that helps solve end-of-chapter problems.
