Edición: 1^a

Sinopsis

ISBN: 9781628082036

In this book, the authors present new developments in archaeology research. Topics include the adequacy of small-scale samplings from ancient pottery for instrumental analysis; the problem of phosphorous pollution in ceramic archaeological materials buried in the ground and polluted Neolithic pottery; and the huge potential in applying archaeological stratigraphic excavation to all kinds of objects, such as paintings, sculptures and even archaeological artefacts themselves.
