Sinopsis

ISBN: 9781412936293

2nd Revised edition. 254 x 178 mm. Brand New Book. It s been more than 50 years since Benjamin Bloom published his Taxonomy of Educational Objectives and Bloom s taxonomy is one of the most widely known and used models in education. While still useful, Bloom s taxonomy doesn t represent the most current research on the nature of knowledge and cognition, nor does it reflect the movement to standards-based education. Marzano s taxonomy is based on three domains of knowledge (information, mental procedures, and psychomotor procedures) and six levels of processing (Retrieval, comprehension, analysis, knowledge utilization, metacognitive, and self-system). Marzano s taxonomy has many uses, including; Designing and classifying educational objectives Designing assessments Redesigning state and district-level standards Designing curriculum Designing a thinking skills curriculum This groundbreaking book is essential reading for directors of curriculum and instruction, directors of staff development, principals, and teachers.
