Sinopsis

ISBN: 9781569905265

Processors and users of plastics often need to determine the chemical nature of a plastics specimen. The highly practical and useful manual, now in a fifth revised and supplemented edition, will enable you to determine the class of plastic of a particular specimen. No extensive knowledge of chemistry is required and yet it is more than a simple tabular compilation. This manual is a handy, highly effective tool for many practical situations. An additional supplement is a chapter that shows strategies for identifying historical plastic objects; this is of particular interest for assemblers, collectors, and conservators
